AC Foam Brings High Quality Foam Products to Gastonia

GASTONIA, NC — AC Foam has located its newest production facility in Gastonia. AC Foam is a custom fabricator of high quality, finished foam products that are primarily used in the commercial construction industry. The company's trademark product, TUFF FOAM™ is a durable, cost effective and attractive exterior finish. The company also offers consultative services for design, installation and CAD Drafting.

TUFF FOAM™ was developed after years of working with chemists, materials specialists, code officials, industry designers, contractors and subcontractors. Specific techniques and materials were developed to realize significant improvements in the areas of durability, reduced installation times and environmental impact.

The parent company of AC Foam, Taylor / Nicholas Group Inc., has over 20 years experience in commercial construction, technical consulting, project management and site management for large scale commercial, institutional and retail projects throughout the US.

"The new facility, located on East Ozark Avenue, will allow the company to expand its operation and better serve its current customer base," said Marc Bolick, Project Administrator, Gaston County Economic Development Commission. The company will invest approximately \$1 million, including machinery & equipment, and employ 12 people. For additional information, please contact Bruce Aycock, President, or Jim Lynch, Director of Marketing, 704-861-0300, or visit AC Foam's web site, <http://acfoam.com>.
